

Welcome

Welcome to our public drop-in on our revised proposals to update the existing planning conditions for Westdown quarry.

Our aim is to secure the supply of limestone used in building and maintaining our homes, schools and roads as well as in the construction of the infrastructure we need as we transition to net zero carbon.

We're here to provide information on our amended proposals, including details on the revised scheme of working and the steps we're taking to mitigate the impact of our operations and protect the environment.

Asham quarry void (hashed area) will be completely outside of the revised scheme boundary
